$EL9343\ Homework\ 12$ Due: Dec. 14th 8:00 a.m.

1. Run the Bellman-Ford algorithm on the following graph, with vertex d as the source. In each pass, relax the edges in the order of $\{(a,b),(a,c),(a,e),(a,f),(b,c),(c,e),(d,e),(d,f),(e,f)\}$. Write down the d array after each pass.

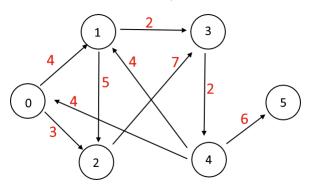

Solution:

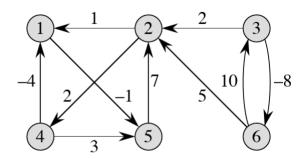

| No. | a | b | С | d | e | f |
|-----|-----|-----|-----|---|-----|-----|
| 1 | inf | inf | inf | 0 | inf | inf |
| 2 | inf | inf | inf | 0 | 3 | 1 |
| 3 | 4 | inf | 8 | 0 | 3 | 1 |
| 4 | 4 | 10 | 8 | 0 | 3 | 1 |

2. Run the Dijkstra's algorithm on the following graph, with node 0 as the source node. Write down the d array before each EXTRACT-MIN, also the final array.

| No. | 0 | 1 | 2 | 3 | 4 | 5 |
|-----|---|-----|-----|-----|-----|-----|
| 1 | 0 | inf | inf | inf | inf | inf |
| 2 | 0 | 4 | 3 | inf | inf | inf |
| 3 | 0 | 4 | 3 | 10 | inf | inf |
| 4 | 0 | 4 | 3 | 6 | inf | inf |
| 5 | 0 | 4 | 3 | 6 | 8 | inf |
| 6 | 0 | 4 | 3 | 6 | 8 | 14 |

3. Run the Floyd-Warshall algorithm on the following graph. Show the matrix $D^{(k)}$ that results for each iteration of the outer loop.

| k | D^k |
|---|--|
| 0 | $\begin{pmatrix} 0 & \infty & \infty & \infty & -1 & \infty \\ 1 & 0 & \infty & 2 & \infty & \infty \\ \infty & 2 & 0 & \infty & \infty & -8 \\ -4 & \infty & \infty & 0 & 3 & \infty \\ \infty & 7 & \infty & \infty & 0 & \infty \\ \infty & 5 & 10 & \infty & \infty & 0 \end{pmatrix}$ |
| 1 | $\begin{pmatrix} 0 & \infty & \infty & \infty & -1 & \infty \\ 1 & 0 & \infty & 2 & 0 & \infty \\ \infty & 2 & 0 & \infty & \infty & -8 \\ -4 & \infty & \infty & 0 & -5 & \infty \\ \infty & 7 & \infty & \infty & 0 & \infty \\ \infty & 5 & 10 & \infty & \infty & 0 \end{pmatrix}$ |
| 2 | $ \left(\begin{array}{cccccccccccccccccccccccccccccccccccc$ |
| 3 | $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$ |
| 4 | $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$ |
| 5 | $ \begin{pmatrix} 0 & 6 & \infty & 8 & -1 & \infty \\ -2 & 0 & \infty & 2 & -3 & \infty \\ 0 & 2 & 0 & 4 & -1 & -8 \\ -4 & 2 & \infty & 0 & -5 & \infty \\ 5 & 7 & \infty & 9 & 0 & \infty \\ 3 & 5 & 10 & 7 & 2 & 0 \end{pmatrix} $ |
| 6 | $ \begin{pmatrix} 0 & 6 & \infty & 8 & -1 & \infty \\ -2 & 0 & \infty & 2 & -3 & \infty \\ -5 & -3 & 0 & -1 & -6 & -8 \\ -4 & 2 & \infty & 0 & -5 & \infty \\ 5 & 7 & \infty & 9 & 0 & \infty \\ 3 & 5 & 10 & 7 & 2 & 0 \end{pmatrix} $ |

4. We are given a directed graph G = (V, E) on which each edge $(u, v) \in E$ has an associated value r(u, v), which is a real number in the range $0 \le r(u, v) \le 1$ that represents the reliability of a communication channel from vertex u to vertex v. We interpret r(u, v) as the probability that the channel from u to v will not fail, and we assume that these probabilities are independent. Give an efficient algorithm to find the most reliable path between two given vertices, u and v. Assume that Dijkstra's algorithm runs in $O(|E|\log|V|)$, and your algorithm should also run in $O(|E|\log|V|)$. Briefly describe why your algorithm is correct.

Similar to Dijkstras algorithm, the time complexity is O(|E|log|V|)

Algorithm 1 Find The Most Reliable Path

```
Input: graph: G = (V,E)
Input: source and target vertex: s, t
Input: probability matrix: r(u, v) \in R
Output: Most Reliable Path
   for v \in V do
     p[v] = 0
   end for
   p[s] = 1
   S = \{\}
   Q = MAX - HEAPIFY(V)
   while Q \neq \mathbf{do}
     u = EXTRACT - MAX(Q)
     for v \in Adj[u] do
       if p[v] < p[v] \times r(u, v) then
          p[v] = p[v] \times r(u, v)
        end if
     end for
   end while
```
